**CORE STRENGTHS** (Personality, Hard & Soft Skills, Expertise, Experience):

- Capable engineer (as well as experienced with cross-functional skills like accounting and inventory systems, even HR / recruitment)
- Hands on coding
- Systems architecture
- Leadership (3 yrs) - currently responsible for 18 developers (before covid they were 32) of all types except DevOps
- Specialization/ Highligh skill: Fullstack - Serverless Event Driven CQRS System on AWS Cloud
- Technology stack – Fullstack Typescript (JS/ NodJS), Golang, Angular, React, PHP & Python (in the past), Hexagonal Architecture, Clean code / SOLID, Test-driven and event-driven development, CICD, GraphQL, SQL, Containerization & Orchestration, Postgre, Aurora, CockroachDB, AWS, GCP

**MOTIVATION, EXPERIENCE AND DECISION FACTORS:**

Current responsibilities - the whole cycle of software development for all platforms, leading the entire engineering force in the company.

Just got promoted and my responsibilities now include Solution Architecture for the umbrella company.

I did projects outside of my full time job (during 2017-2019 serviced in my free time for an US company - Keller Williams Realty).

I loves hands-on coding, but is excited to get more involved with architecture and product management in the future.

I have not applied for jobs in my career, always being asked by my seniors or coleagues to follow them in different companies.

Not actively applying, but companies reach out to him and if he likes the opportunities, I responds.

Willing to relocate, first alone and later on will prepare to bring my wife and kids (2 of them).

**PRIORITIES** *(the most important decision factors when considering opportunities):*

- Experience with the first touch points / interview process and conversations with the employees of the company
- Growth - Opportunity to keep growing as a human and as a professional
